

# SCREW ON ICE STUDS

"When you just don't have enough clearance for chains"

Every winter, municipalities, lumber yards, farmers and homeowners face the same problem - poor traction due to harsh winter conditions. Heavy equipment such as tractors, forklifts and skid steers have to operate on icy surfaces and demand optimal traction.

MAXIGRIP studs provide superior traction **for equipment with clearance tolerances where tire chains are not a viable option** - tire chains will not fit or may cause damage to the equipment. They are also a great alternative to having a second set of studded winter wheels.

MAXIGRIP studs are easy to install, durable and can be used season after season.

## 3 Popular Sizes

			QTY
HM-15			100
HM-18			100
HM-25			100

### HM-15

This stud is 15 mm and requires a tread depth of at least 14 mm. Intended for **mid-sized ATV's, smaller tractors and working vehicles.**

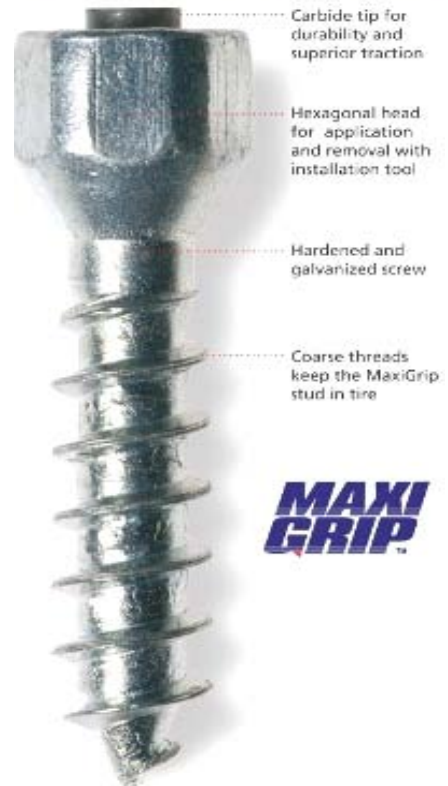

### HM-18

This stud is 18 mm and requires a tread depth of at least 17 mm. Intended for **larger ATV's, small tractors, working vehicles compact loaders and fork lifts.**

### HM-25

This stud is 25 mm and requires a tread depth of at least 24 mm. Intended for **mid-sized tractors, fork lifts, contractor vehicles and compact loaders.**
